

EPOS TCS Satellite Data: Observations and Products for Geohazards Analyses

Michele Manunta

TCS Satellite Data Director

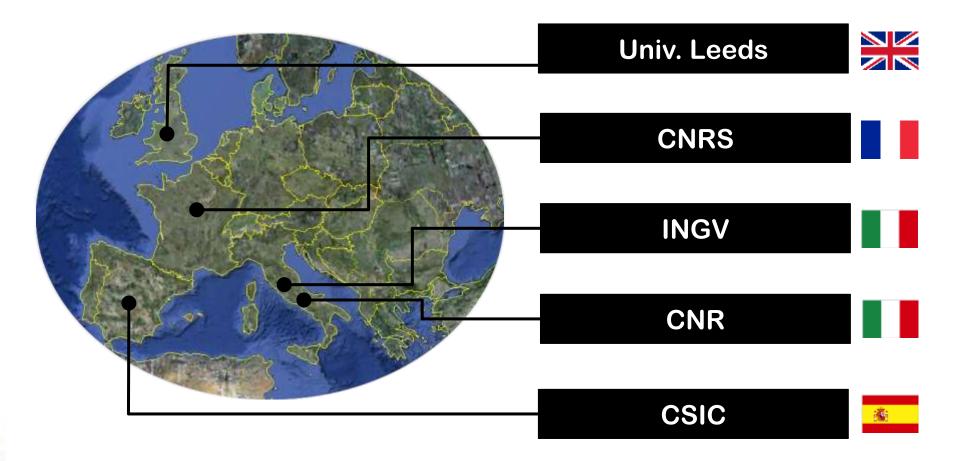

CNR-IREA – Italy – email: manunta.m@irea.cnr.it

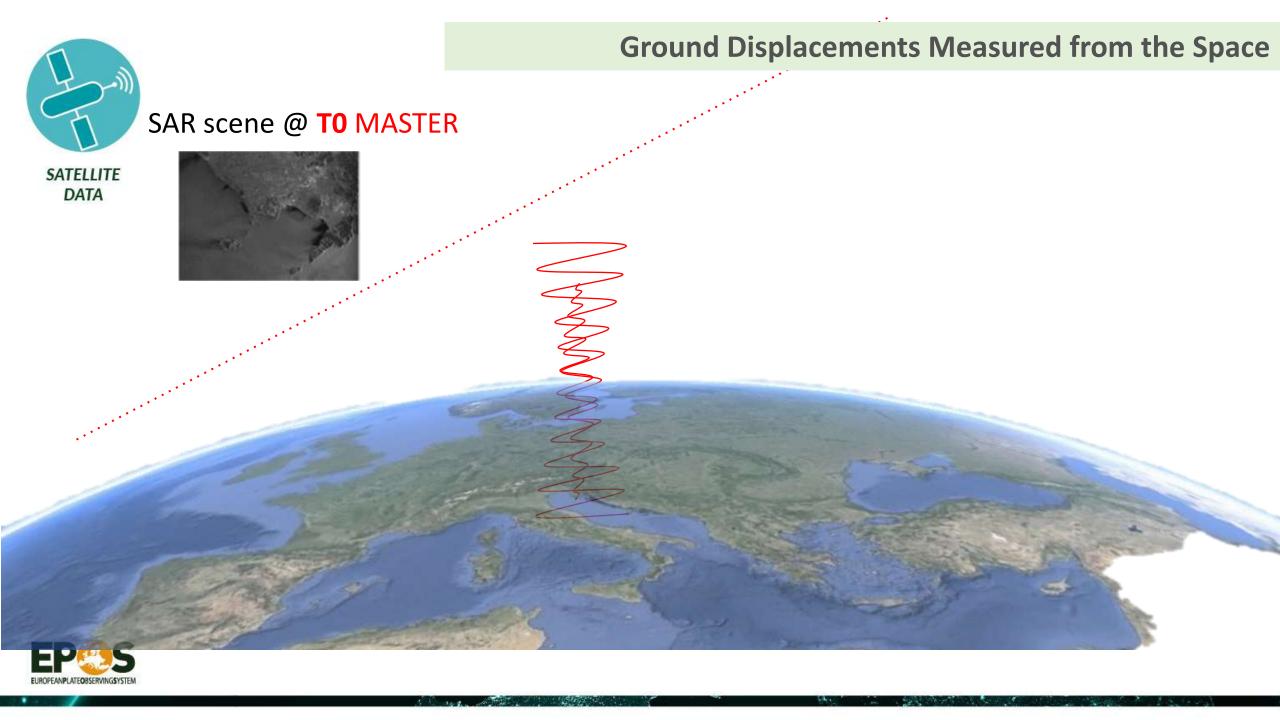

TCS Satellite Data

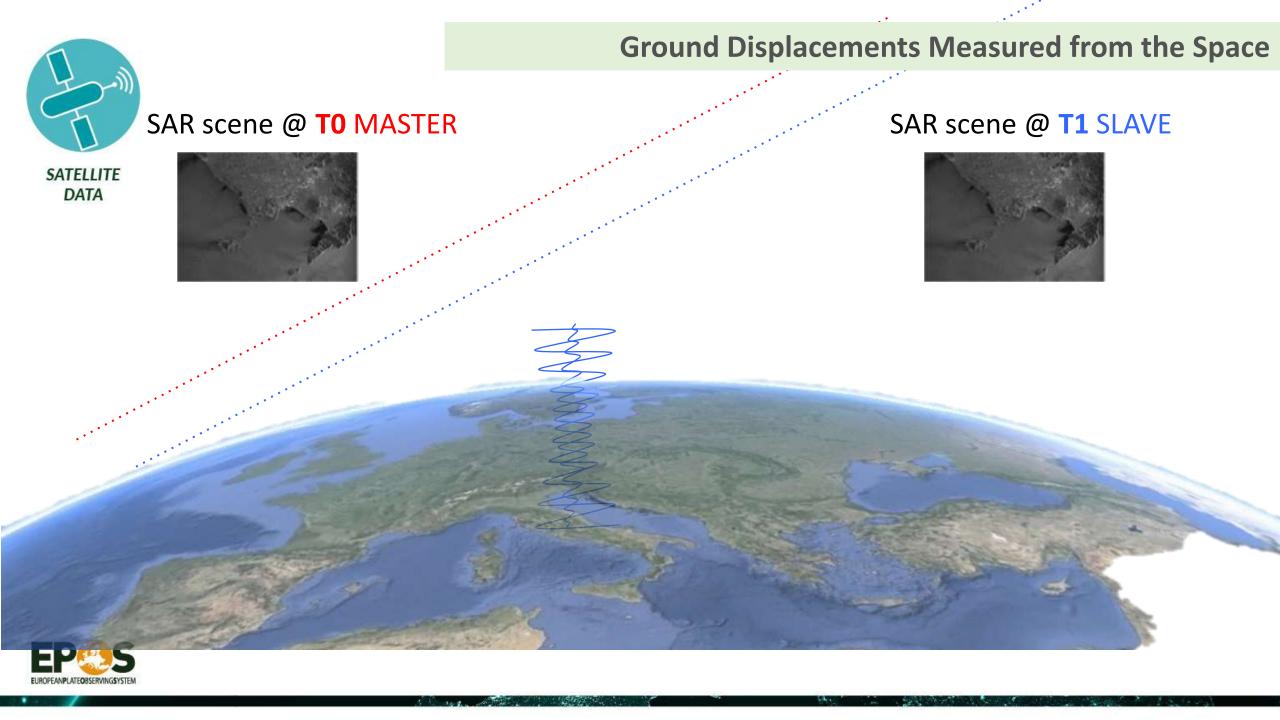

TCS Satellite Data aims to foster the use and re-use of satellite data and products to establish multidisciplinary research in Earth sciences. TCS SATD widely benefits from the Copernicus Programme to deploy advanced satellite services with a free and open data access policy.

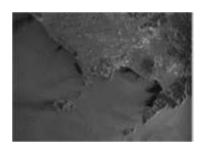

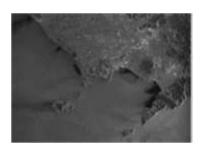

Ground Dispaclements Measured from the Space

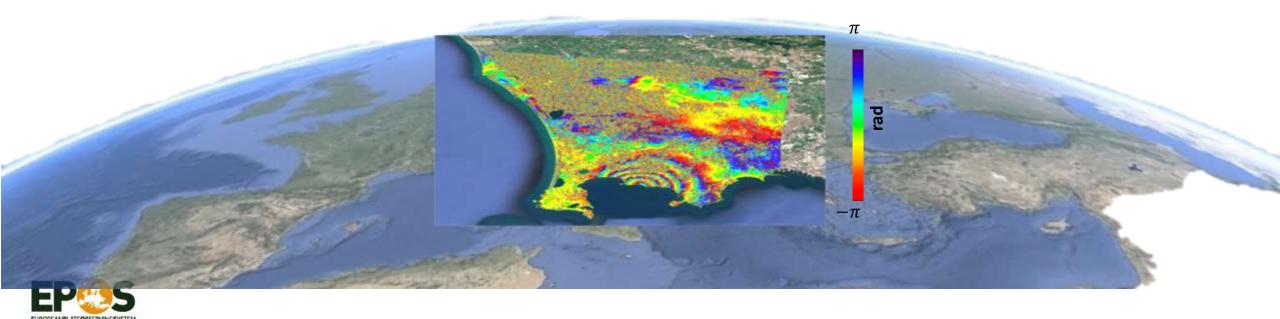

SAR scene @ TO MASTER

SAR scene @ T1 SLAVE

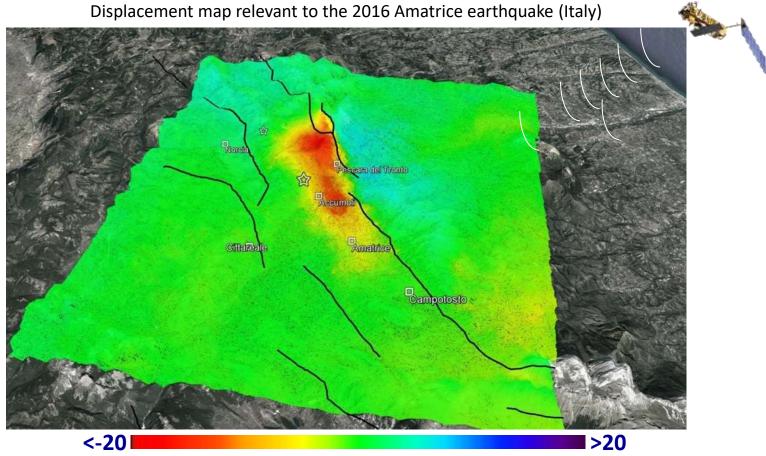

Ground Displacements Measured from Space

With the **DInSAR** (or **InSAR**) technique, we can measure ground displacements with centimeter to millimeter accuracy by combining two SAR acquisitions collected at different times

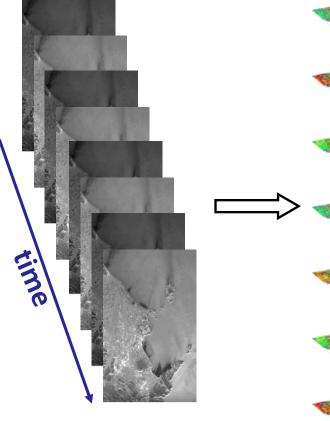

LOS Deformation [cm]

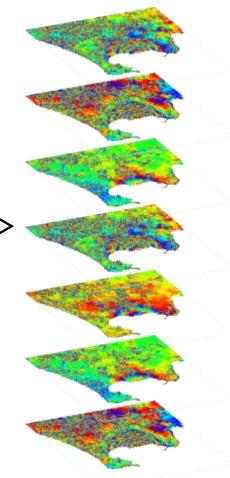

Advanced DInSAR Products

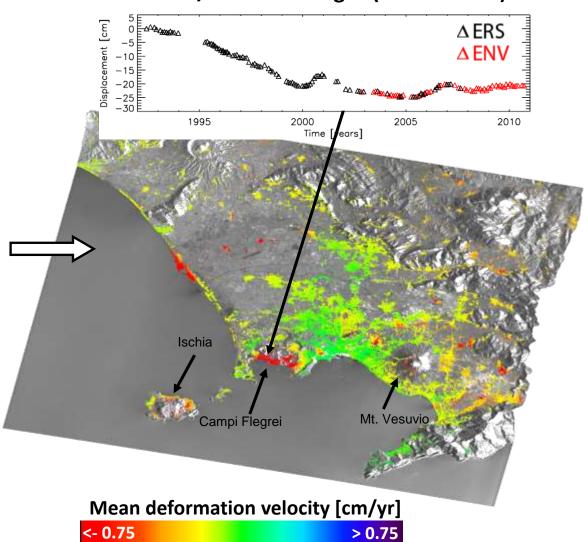

Satellite SAR Images

Interferograms

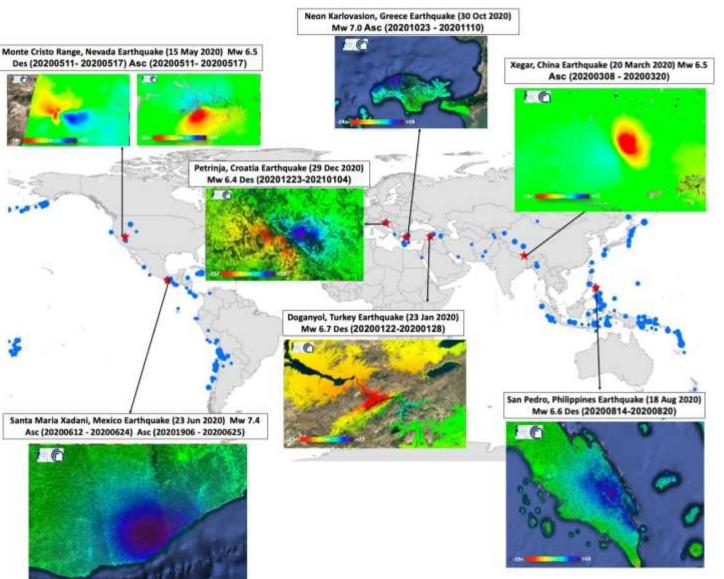

ERS/ENVISAT images (1992 – 2010)

TCS Satellite Data Operative Services

EPOSAR service

Copernicus Programme provides
quasi-real-time satellite images.
EPOS exploits this service to make
updated displacement maps for
each seismic event (Mw >5) on land
available to the user community.

EPOSAR works at a global scale

EPOSAR service over Reykjanes area (Island)
